PROFESSIONAL SUMMARY

Backend engineer with 7+ years designing and operating server-side systems, mostly in fintech. Experience across REST and GraphQL API design, payment and transaction processing, relational and document data modelling, and the AWS infrastructure underneath. Built platforms serving 10,000+ and 15,000+ active users.

SKILLS

Languages	TypeScript · JavaScript · Go · Python · PHP
Backend	Node.js · Express · Django · Django REST · GraphQL · REST
Data	PostgreSQL · MongoDB · MySQL · Prisma
Cloud & Infrastructure	AWS · Terraform · Docker · GitHub Actions · DigitalOcean
Frontend	React · Next.js · Vue

EXPERIENCE

Full Stack Engineer · Kikokushijo Academy (Tokyo, Japan · Remote) Jan 2026 – Present

- Build and maintain the services behind a learning platform serving students, parents and instructors across 11+ campuses and a global distance-learning cohort.
- Modelled the data layer in MongoDB with Prisma, covering separate student and parent access models.
- Own the deploy path: environments, releases, the database and hosting configuration.

Frontend Developer · BPOSeats (Cebu, Philippines · Remote) Oct 2023 – Apr 2026

- Built server-side features in Django and Django REST Framework, and profiled and rewrote the slowest API endpoints.
- Introduced MJML for transactional email so templates render consistently across major email clients.
- Worked across the Vue.js client and the API, defining the response contracts between them.

Senior Software Developer · Helppo Africa (Lagos, Nigeria · Remote) May 2023 – Nov 2023

- Led backend development on a financial platform serving over 10,000 active users.
- Designed and integrated REST and GraphQL APIs consumed by the web and mobile clients.
- Implemented payment processing and transaction management, and the security controls around money movement.

Mobile App Developer · Xedla Pay (Kwara, Nigeria) Contract, concurrent · Jan 2023 – Present

- Primary author of four backend services: identity and accounts, escrow, transactions and virtual cards. Node, Express and MongoDB with Redis, each separately deployed with its own test suite and CI pipeline.
- Built escrow as an isolated service holding funds against a transaction, with release, reversal and human dispute appeal, so a failure elsewhere cannot reach custody logic.
- Integrated banking-as-a-service transfer rails and a tiered identity provider, and wrote the request-encryption layer shared across the platform clients.

Frontend Developer · Summitech Computing Ltd (Lagos, Nigeria · Remote) Oct 2022 – May 2023

- Worked on the API layer behind enterprise software products, including database query performance.
- Built reusable frontend component libraries against those APIs, adopted across multiple products.

Frontend Developer · VeendHQ (Wyoming, USA · Remote) Contract · Feb 2022 – Oct 2022

- Built fintech platforms serving over 15,000 users, working across the service boundaries between web, mobile and the backend APIs.
- Wrote unit tests and worked through the defects that reached production.

Senior Software Developer · Fovero Digital Technologies (Lagos, Nigeria) Part-time · Feb 2020 – Jan 2022

- Led design and delivery of web and mobile software for agency clients, from scoping through release.
- Ran the infrastructure side end to end: provisioning, deployment, DNS, certificates and uptime.
- Mentored junior developers and ran code review.

- Designed and delivered training on core programming concepts.
- Built and deployed client web applications in HTML, CSS, JavaScript and PHP.

PROJECTS

MosesTab (mosestab.com) — Tenant-scoped church management SaaS: members, events, attendance, child check-in and giving. Per-church Stripe Connect accounts and payouts, and SMS text-to-give over Twilio. React · TypeScript · Next.js · Stripe

Braandly (braandly.com) — Multi-tenant brand management SaaS. Workspace-scoped data across 85 models, a versioned public REST API, a self-built OAuth 2.1 server and an MCP server exposing 102 tools. Sole author of the backend; I build and operate it end to end. Next.js · Express · MongoDB · Redis

healthcheck-service (github.com/MaestroHaryor/healthcheck-service) — Self-hosted uptime monitor in Go. Checks one endpoint on a schedule and alerts to Slack and email. Go

supabase-pings (github.com/MaestroHaryor/supabase-pings) — Single Go binary that keeps free-tier Supabase projects from pausing via scheduled pings. Go

EDUCATION

University of Ilorin, Nigeria — B.Sc. Physiology, 2019

CERTIFICATIONS

AWS Solutions Architect Associate (SAA-C03) — *In progress*

CompTIA Security+ — *Planned*

AWS Security Specialty — *Planned*
