### PROFESSIONAL SUMMARY

Fullstack engineer with 7+ years building and operating production systems, primarily in fintech. Experience spans multi-tenant SaaS architecture, payment and transaction systems, and the infrastructure that runs them: AWS managed with Terraform, Docker, CI pipelines and self-hosted monitoring written in Go. Currently specialising in cloud architecture and security, with AWS Solutions Architect Associate in progress.

### SKILLS

|                                   |                                                                                              |
|-----------------------------------|----------------------------------------------------------------------------------------------|
| <b>Cloud &amp; Infrastructure</b> | AWS (S3, EC2, ECS, IAM, VPC) · Terraform · Docker · GitHub Actions · Vercel · DigitalOcean   |
| <b>Languages</b>                  | TypeScript · JavaScript · Go · Python · PHP                                                  |
| <b>Backend</b>                    | Node.js · Express · Django · REST · GraphQL                                                  |
| <b>Data</b>                       | PostgreSQL · MongoDB · MySQL · Prisma                                                        |
| <b>Security</b>                   | IAM and least-privilege design · Payment flow security · Dependency and supply-chain hygiene |

### EXPERIENCE

**Full Stack Engineer · Kikokushijo Academy** (Tokyo, Japan · Remote) Jan 2026 – Present

- Own fullstack delivery of a production learning platform across 11+ campuses and a global distance-learning cohort, including the deploy path: environments, releases, database and hosting configuration.
- Shipped real-time collaborative features including a multi-user lesson whiteboard and attendance tracking.

**Mobile App Developer · Xedla Pay** (Kwara, Nigeria) Contract, concurrent · Jan 2023 – Present

- Author AWS infrastructure as code with Terraform. In production: S3 buckets and the remote state backend, with versioning, server-side encryption and public-access blocking.
- Defined a validated staging environment in Terraform covering VPC and subnets, EC2, ECS, ECR, CloudWatch and IAM roles and policies.
- Primary author of four separately deployed backend services, each with its own test suite and pull-request, staging and production pipelines.

**Frontend Developer · BPOSeats** (Cebu, Philippines · Remote) Oct 2023 – Apr 2026

- Led frontend development for the company's internal platform in Vue.js and SCSS, building the responsive component set used across the product.
- Built server-side features in Django and Django REST Framework, and profiled and rewrote the slowest API endpoints.
- Introduced MJML for transactional email so templates render consistently across major email clients.

**Senior Software Developer · Helppo Africa** (Lagos, Nigeria · Remote) May 2023 – Nov 2023

- Led development on a financial platform serving over 10,000 active users.
- Implemented the security controls around payment and transaction flows.

**Frontend Developer · Summitech Computing Ltd** (Lagos, Nigeria · Remote) Oct 2022 – May 2023

- Built and maintained frontend for enterprise software products, engineering reusable component libraries adopted across multiple products.
- Worked on the API layer alongside the frontend, including database query performance.

**Frontend Developer · VeendHQ** (Wyoming, USA · Remote) Contract · Feb 2022 – Oct 2022

- Built and maintained fintech platforms serving over 15,000 users at a Techstars '23 company.
- Used server-side rendering and static generation in Next.js where it helped load performance.
- Contributed to the React Native mobile app against the same APIs.

**Senior Software Developer · Fovero Digital Technologies** (Lagos, Nigeria) Part-time · Feb 2020 – Jan 2022

- Ran client infrastructure end to end: provisioning, deployment, DNS, certificates and uptime monitoring.
- Led design and delivery of web and mobile software for agency clients, from scoping through release.

- Designed and delivered training on core programming concepts.
- Built and deployed client web applications in HTML, CSS, JavaScript and PHP.

## PROJECTS

**MosesTab** ([mosestab.com](https://mosestab.com)) — Tenant-scoped church management SaaS: members, events, attendance, child check-in and giving. Per-church Stripe Connect accounts and payouts, and SMS text-to-give over Twilio. React · TypeScript · Next.js · Stripe

**Braandly** ([braandly.com](https://braandly.com)) — Multi-tenant brand management SaaS. Workspace-scoped data across 85 models, a versioned public REST API, a self-built OAuth 2.1 server and an MCP server exposing 102 tools. Sole author of the backend; I build and operate it end to end. Next.js · Express · MongoDB · Redis

**healthcheck-service** ([github.com/MaestroHaryor/healthcheck-service](https://github.com/MaestroHaryor/healthcheck-service)) — Self-hosted uptime monitor in Go. Checks one endpoint on a schedule and alerts to Slack and email. Go

**supabase-pings** ([github.com/MaestroHaryor/supabase-pings](https://github.com/MaestroHaryor/supabase-pings)) — Single Go binary that keeps free-tier Supabase projects from pausing via scheduled pings. Go

## EDUCATION

**University of Ilorin, Nigeria** — B.Sc. Physiology, 2019

## CERTIFICATIONS

AWS Solutions Architect Associate (SAA-C03) — *In progress*

CompTIA Security+ — *Planned*

AWS Security Specialty — *Planned*
