PROFESSIONAL SUMMARY

Fullstack engineer with 7+ years building and operating production systems, mostly in fintech. Experience spans multi-tenant SaaS architecture, payment and transaction systems, and the infrastructure that runs them. Currently building the learning platform behind an 11-campus academy in Tokyo, with AWS Solutions Architect Associate in progress.

SKILLS

Languages	TypeScript · JavaScript · Go · Python · PHP
Frontend	React · Next.js · Vue · Svelte / SvelteKit · TailwindCSS
Backend	Node.js · Express · Django · REST · GraphQL
Data	PostgreSQL · MongoDB · MySQL · Prisma
Cloud & Infrastructure	AWS · Terraform · Docker · GitHub Actions · Vercel · DigitalOcean

EXPERIENCE

Full Stack Engineer · Kikokushijo Academy (Tokyo, Japan · Remote) Jan 2026 – Present

- Build and maintain the learning platform for an English academy running 11+ campuses across Tokyo, Yokohama and Chiba, plus a distance-learning cohort studying from anywhere in the world.
- Shipped real-time collaborative features including a multi-user lesson whiteboard and attendance tracking across in-person and remote sessions.
- Built a no-code form builder so staff can create and change forms without engineering involvement.
- Own the deploy path: environments, releases, the data layer and hosting configuration.

Frontend Developer · BPOSeats (Cebu, Philippines · Remote) Oct 2023 – Apr 2026

- Led frontend development for the company's internal platform in Vue.js and SCSS, building the responsive component set used across the product.
- Built server-side features in Django and Django REST Framework, and profiled and rewrote the slowest API endpoints.
- Introduced MJML for transactional email so templates render consistently across major email clients.

Senior Software Developer · Helppo Africa (Lagos, Nigeria) May 2023 – Nov 2023

- Led development on a financial platform serving over 10,000 active users.
- Designed and integrated REST and GraphQL APIs for the web and mobile clients.
- Implemented payment processing and transaction management, including the security controls around them.

Mobile App Developer · Xedla Pay (Kwara, Nigeria) Contract, concurrent · Jan 2023 – Present

- Primary author of four backend services: identity and accounts, escrow, transactions and virtual cards. Node, Express and MongoDB with Redis, each separately deployed with its own test suite and CI pipeline.
- Built escrow as an isolated service holding funds against a transaction, with release, reversal and human dispute appeal, so a failure elsewhere cannot reach custody logic.
- Integrated banking-as-a-service transfer rails and a tiered identity provider, so an account's limits follow how much of itself it has verified.
- Author AWS infrastructure as code with Terraform, including the production S3 buckets and remote state backend, with versioning, server-side encryption and public-access blocking.

Frontend Developer · Summitech Computing Ltd (Lagos, Nigeria · Remote) Oct 2022 – May 2023

- Built and maintained frontend for enterprise software products, engineering reusable component libraries adopted across multiple products.
- Worked on the API layer alongside the frontend, including database query performance.

Frontend Developer · VeendHQ (Wyoming, USA) Contract · Feb 2022 – Oct 2022

- Built and maintained fintech platforms serving over 15,000 users at a Techstars '23 company.
- Used server-side rendering and static generation in Next.js where it helped load performance.
- Contributed to the React Native mobile app against the same APIs.

Senior Software Developer · Fovero Digital Technologies (Lagos, Nigeria)

Part-time · Feb 2020 – Jan 2022

- Led design and delivery of web and mobile software for agency clients, from scoping through release.
- Ran the infrastructure side end to end: provisioning, deployment, DNS, certificates and uptime.
- Mentored junior developers and ran code review.

IT Instructor · New Horizons Computer Learning Centers (Lagos, Nigeria)

Oct 2019 – Feb 2020

- Designed and delivered training on core programming concepts.
- Built and deployed client web applications in HTML, CSS, JavaScript and PHP.

PROJECTS

MosesTab (mosestab.com) — Tenant-scoped church management SaaS: members, events, attendance, child check-in and giving. Per-church Stripe Connect accounts and payouts, and SMS text-to-give over Twilio. React · TypeScript · Next.js · Stripe

Braandly (braandly.com) — Multi-tenant brand management SaaS. Workspace-scoped data across 85 models, a versioned public REST API, a self-built OAuth 2.1 server and an MCP server exposing 102 tools. Sole author of the backend; I build and operate it end to end. Next.js · Express · MongoDB · Redis

BringVan (bringvan.com) — UK moving-company directory built on programmatic SEO: generated location and company pages, faceted search, and contact-click attribution. Next.js

healthcheck-service (github.com/MaestroHaryor/healthcheck-service) — Self-hosted uptime monitor in Go. Checks one endpoint on a schedule and alerts to Slack and email. Go

EDUCATION

University of Ilorin, Nigeria — B.Sc. Physiology, 2019
